

App Store Intelligence

A Data-Driven Approach to Launching a Sustainability App

Author: [Your Name] | Data Analysis & AI Student

Exploratory Data Analysis

Deciphering the Google Play Store Dataset

Dataset Characteristics

Core Metrics

- **Rows:** 10,841 raw entries
- **Cleaned:** 9,745 unique App-Category pairs
- **Categories:** 34 distinct sectors
- **Variables:** Rating, Reviews, Installs, Price, Category

Methodology

- **Cleanup:** Parsing numeric values (Rating, Reviews, Installs, Price)
- **Scale:** Logarithmic transformations for Installs & Reviews (heavy-tailed)
- **Tests:** Mann-Whitney U for Paid vs Free analysis

Initial Hypotheses

- **Interest vs. Competition:** High install categories (Interest) like GAMES are oversaturated (Competition).
- **Monetization Impact:** Free apps significantly dominate installs, but Paid apps might maintain higher average ratings.
- **Rating vs. Installs:** High ratings do not automatically guarantee high volume, suggesting other growth drivers.

Competition: Top 10 Categories

The "FAMILY" and "GAME" categories represent the highest entry barriers due to extreme competition.

| Interest Metric

1M

Median Installs (GAME)

Volume vs. Density

Median Installs serve as our primary proxy for "User Interest." While Games lead the volume, sectors like **WEATHER**, **EDUCATION**, and **VIDEO_PLAYERS** also show high median traction with significantly fewer apps.

This suggests "Blue Ocean" opportunities where user needs are high but competition is lower.

Top Opportunities identified

Category	App Count	Median Installs	Opportunity Score
BUSINESS	420	1,000	27.0
MEDICAL	396	1,000	26.0
TOOLS	829	50,000	19.0
PERSONALIZATION	376	10,000	19.0
LIFESTYLE	369	10,000	17.0

*Score = (rank_median_installs – rank_appcount). Higher means more interest relative to competition.

Strategy & Forecast

The Path to a Successful Sustainability App

Proposed Strategy: B2B Focus

Target Sector

Focus on **BUSINESS** category. High potential for ESG-aligned tools with manageable competition.

Model

Freemium: Free carbon tracking + Premium subscription for school/corporate reporting & analytics.

Features

CO₂ footprint tracking, zero-waste challenges, and local eco-partner discount integrations.

Monetization Potential

Revenue Forecast (Base)

Capturing 0.5% market share in the BUSINESS category (approx. 3.4M MAU) could generate:

- Annual Subscription: \$3.1M
- Annual Ad Revenue: \$10.4M
- **Total Annual: \$13.5M**

Development Roadmap

Month 1: EDA

Deep dive into competitors in the BUSINESS sector and feature mapping.

Month 3: MVP

Launch core tracking features for early adopters and beta testing.

Month 6: V1.0

Integrate gamification and partner marketplace rewards.

Month 12: Scale

Expand to corporate licensing and school certification programs.

Questions?

Thank you for your time. The full Python notebook and detailed CSV files are available in the project repository.
